Art Unit: 2814

Attorney's Docket Number: 740756-2255

Filing Date: 2/1/01

Continuing Data: RCEs established 3/27/2003, 8/19/2004, 10/13/2005, 11/22/2006,

10/5/2007 and 10/16/2008

Claimed Foreign Priority Date: 2/1/00 (JPX)

Applicant(s): Koyama et al. (Kato)

**Examiner: Howard Weiss** 

#### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/16/2008 has been entered.

# Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 3. Claims 97 to 101 and 130 to 133 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is nothing in the Specification that indicates that the third film comprises an inert element.
- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2814

5. Claims 110 to 114 and 144 to 147 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claims 110 to 114 and 144 to 147 recite the limitation "the inert element" in Line 2. There is insufficient antecedent basis for this limitation in the claims.

## Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 1, 77, 79 to 81, 83, 84, 87,89, 90, 93, 95, 96, 102, 103, 106, 108, 109, 115, 116 and 122 to 129, 134 to 143 and 148 and 149 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al. (JP 11-154714 and the Derwent Translation of this document), Tsutsumi (U.S. Patent No. 5,844,274) and Wu et al. (U.S. Patent No. 5,066,992).

Art Unit: 2814

Yamazaki et al. show most aspects of the instant invention (e.g. Figures 1 to 8) including:

- ➤ a memory cell array with memory cells formed in a n x m matrix with X-address 101 and Y-address 102 decoders electrically connected to signal lines Cnn,Dnn, Amm,Bmm
- ➤ each cell containing a memory thin film transistor (MTFT) Tr1 and a switching thin film transistor (STFT) Tr2
- said MTFT including:
  - a first semiconductor active layer 202 formed on an insulating substrate
     201, having a first thickness d1 and comprising a channel forming region
     205 and source/drain regions 203,204
  - a first insulating film 211, a conductive layer (i.e. floating gate electrode) 213 adjacent to the first semiconductive active layer and used to trap electrons, a second insulating film 214 of an oxide and a control gate electrode 215
  - o a wiring 825 for connecting the control gate to a first single line 809
- said STFT including:
  - a second semiconductor active layer 206 formed on an insulating substrate 201 and having a second thickness d2
  - o a gate insulating layer 212 and a gate electrode 217
  - o a second signal line **810** connected to said gate electrode
- > where in **d1** is thinner (i.e. smaller) than **d2** (Paragraphs 0058 and 0059)

Yamazaki et al. does not show the floating gate comprising silicon with one conductivity, the control gate comprising a laminate of three films: TaN/W/WN and the border between the channel region and the drain region is aligned with the edge of the floating gate (i.e. layer for trapping electrons).

Tsutsumi teaches (e.g. Column 17 Lines 14 to 20) it is common, and therefore obvious, to form gate electrodes of layers comprising TaN/W/WN. It would have

Art Unit: 2814

been obvious to a person of ordinary skill in the art at the time of invention to form gate electrodes of layers comprising TaN/W/WN as taught by Tsutsumi in the device of Yamazaki et al. since it is common in the art to do so. Also, it is common to use silicon with one conductivity (e.g. doped polysilicon) as floating gate material. Therefore, because these conductive materials were art-recognized equivalents at the time of the invention was made and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, one of ordinary skill in the art would have found it obvious to use TaN/W/WN and doped silicon since their substitution would have yielded predictable results. See Supreme Court decision in KSR International Co. v. Teleflex Inc., 550 U.S. , 82 YSPQ2d 1385 (2007).

Wu et al. teach (e.g. Figure 3) to align the edge of a floating gate **26** with the border between a channel region **41** and a drain region **19** to realize a smaller cell size (Column 1 Lines 62 to 65). It would have been obvious to a person of ordinary skill in the art at the time of invention to align the edge of a floating gate with the border between a channel region and a drain region to realize a smaller cell size.

9. Claims 117, 118, 120, 121 and 150 to 153 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al., Wu et al. and Tsutsumi, as applied to Claim 1 above, and further in view Akbar (U.S. Patent No. 5,656,845).

Yamazaki et al., Wu et al. and Tsutsumi show most aspects of the instant invention (Paragraph 8) except for the first and second semiconductor layer in a common semiconductor island. Akbar teaches (e.g. Figures 1 and 8 to 10) to form first and second semiconductor layers in a common semiconductor island (i.e. layer) 122 to provide memory cells with improved performance and reliability (Column 2 Lines 19 to 22). It would have been obvious to a person of ordinary skill in the art at the time of invention to form first and second semiconductor layers in a common

Art Unit: 2814

semiconductor island as taught by Akbar in the device of Yamazaki et al., Wu et al. and Tsutsumi to provide memory cells with improved performance and reliability.

10. Claims 78, 82, 88, 94 and 105 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al., Wu et al. and Tsutsumi, as applied to Claim 1 above, and further in view of Koyama (U.S. Patent No. 5,793,344).

Yamazaki et al., Wu et al. and Tsutsumi show most aspects of the instant invention (Paragraph 8) except for the semiconductor device comprising a pixel portion over the substrate, a source wiring driver circuit for driving the pixel portion over the substrate and a gate wiring driver circuit for driving the pixel portion over the substrate for controlling the non-volatile memory circuit all part of an LCD of a video camera. Koyama teach (Paragraph 3) to use the memory device with the listed devices to produce a high quality display device (Column 7 Lines 55 to 61). It would have been obvious to a person of ordinary skill in the art at the time of invention to use the memory device of Yamazaki et al., Wu et al. and Tsutsumi with the listed devices of Koyama to produce a high quality display device.

11. Claim 119 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al., Wu et al., Tsutsumi and Koyama, as applied to Claim 78 above, and further in view of Akbar.

Yamazaki et al., Wu et al., Tsutsumi and Koyama show most aspects of the instant invention (Paragraph 10) except for the first and second semiconductor layer in a common semiconductor island. Akbar teaches (e.g. Figures 1 and 8 to 10) to form first and second semiconductor layers in a common semiconductor island (i.e. layer) 122 to provide memory cells with improved performance and reliability (Column 2 Lines 19 to 22). It would have been obvious to a person of ordinary skill in the art at the time of invention to form first and second semiconductor layers in a common semiconductor island as taught by Akbar in the device of Yamazaki et al., Wu et al.,

Art Unit: 2814

Tsutsumi and Koyama to provide memory cells with improved performance and reliability.

### Response to Arguments

12. Applicant's arguments with respect to Claims 1, 77 to 84, 87 to 90, 93 to 103, 105, 106 and 108 to 153 have been considered but are moot in view of the new ground(s) of rejection. The Examiner has revived the claim rejections based on 35 USC § 112 of those claim referring to including an inert gas in the conductive layer. The Examiners arguments from previous Office Actions on this limitation (e.g. Office Action of 6/15/2007) are still pertinent and considered repeated herein.

### Conclusion

- 13. Papers related to this application may be submitted directly to Art Unit 2814 by facsimile transmission. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The Art Unit 2814 Fax Center number is (571) 273-8300. The Art Unit 2814 Fax Center is to be used only for papers related to Art Unit 2814 applications.
- 14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Howard Weiss at (571) 272-1720 and between the hours of 7:00 AM to 3:00 PM (Eastern Standard Time) Monday through Friday or by e-mail via <a href="mailto:Howard-Weiss@uspto.gov">Howard-Weiss@uspto.gov</a>. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy, can be reached on (571) 272-1705.
- 15. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

Art Unit: 2814

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at **866-217-9197** (toll-free).
